

QUATTRO EQUIFLEX PADDED FLOORS & WALLS

The Equiflex system has been designed as a fully sealed system for knockdown & recovery rooms in equine hospitals and clinics.

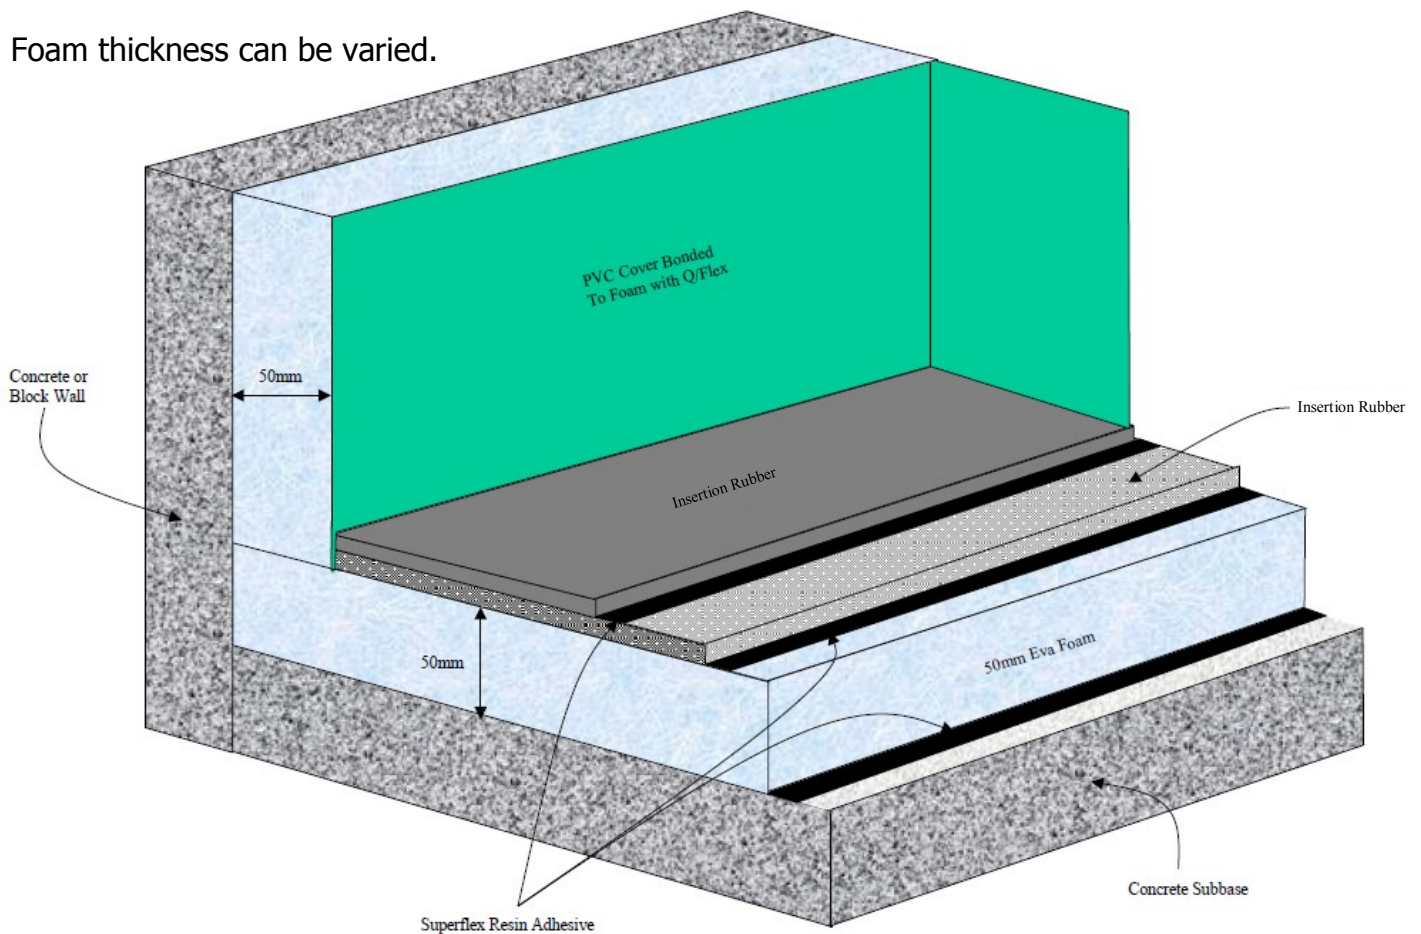

Quattro's Equiflex padded floor system comprises of:

A 50mm foam, resin bonded to concrete, over which a layer of 4mm insertion rubber is resin bonded to the foam surface with a final layer of insertion rubber resin bonded at a right angle over the top of the first layer.

Quattro's Equiflex padded wall system comprises of:

A 50mm foam, resin bonded to walls and doors, over which one layer of 2mm reinforced PVC wall covering is fixed above and below with PVC fixing strips and resin bonded to the foam surface.

Foam thickness can be varied.
